

```
1 <%@ Page Language="C#" %>
2 <%@ Import Namespace ="System.Web.Services.Protocols" %>
3 <%@ Import Namespace="com.ecocoma.service" %>
4
5 <script runat="server">
6     protected void Page_Load(object sender, EventArgs e)
7     {
8         Whois_Service service = new Whois_Service();
9         Whois whois = new Whois();
10
11         service.SoapVersion = SoapProtocolVersion.Soap12;
12         whois = service.GetWhois("Your Key ID", "", "www.silverlight.net");
13
14         Response.Write(whois.Description);
15     }
16 </script>
17
18 <!--
19 - In Visual Studio Solution Explorer, right click on your project and choose Add Web Reference.
20 - In the URL text box, type in http://service.ecocoma.com/domain/whois.asmx. This is really your choice -<
    they all end up giving the same information. Hit enter.
21 - Specify a reference name. Please put something like com.ecocoma.service, but feel free to name it <
    whatever you want. Hit the Add Reference button. This name will become the namespace that the <
    autogenerated proxy classes will live in.
22 - Now, in any file you want to use the proxies, add a
23 using com.ecocoma.service;
24 at the top of the file.
25 -->
